

SODELEG

gets involved in

Sustainability.

As for many Companies,
economic growth is a major concern for Sodeleg.

Nevertheless, Sodeleg believes that economic growth comes with social progress and that this economic growth and social progress must not endanger futures generations. We have to preserve our environment, vital resources to our development and take part in the fight against Global Warming. You will find below the 3 pillars which are linked today to Sustainability: Economic, Social and Societal and Environmental.

Strong in our conviction,
Sodeleg has decided to issue a Charter in which the company gets involved with our suppliers, customers, partners, owners and the local community, ...
to respect the Great Sustainability principles..

ECONOMIC PILLAR

- To have a responsible and consistent Pricing Policy,
- To bring to customers knowledge, advice, assistance, and good follow up transparency,
- To buy fully traceable Raw Material and get guarantees from our suppliers and growers,
- To invest in order to insure Sodeleg Permanence and to evaluate these investments,
- To adopt an economical and responsible behaviour.

SOCIAL and SOCIETAL PILLAR

- To insure Good Working Conditions for our employees, to pay attention to workers' conditions,
- To be fair and respectful to relations with employees, customers and suppliers,
- To guarantee the fairness and to promote diversity (non discrimination) : origin, sex, age ...
- To improve employees' abilities through worker training,
- To have a policy which enhances the local products and producers,
- To contribute to local Life

ENVIRONMENT PILLAR

- Resources : to limit use and reduce the impact on the environment,
- Water : to reduce consumption and to recycle used water,
- Wastes : to reduce them from their origins and sort them,
- Energy (Gas and Electricity): to contain and limit the consumption,
- Air : to measure and contain emissions (smell / gas / dust)
- Noise : to consider and handle "noise pollution" linked to our activity (transport)
- Raw Material: to control our Good Agricultural Practice for our Raw Material Production.
